

Dear colleagues,

I am committed to the advancement of integrative care for individuals with tethered oral tissues and airway-related challenges and am eager to contribute to ICAP's continued growth and international reach by serving on its Board. My motivation stems from a strong desire to support evidence-informed collaboration, education, and advocacy in this evolving field. I am passionate about ensuring that clinicians and families worldwide have access to high-quality, interdisciplinary care models that prioritise function and long-term health outcomes.

Professionally, I bring extensive clinical experience in assessing and managing patients with tethered oral tissues within an airway-focused, orofacial myofunctional, and speech pathology framework. I work closely with release providers and multidisciplinary teams to optimise pre- and post-release outcomes. As the founder of AOMC (Australian Orofacial Myology Collaboration), and Q Speech Hub in Australia, I have created platforms that integrate education, clinical excellence, and collaboration among allied health and dental professionals.

I have held leadership and organisational roles, including being part of the AAPMD Organising Committee. These experiences have strengthened my ability to lead initiatives, foster collaboration, and contribute to strategic growth within professional communities.

My involvement with ICAP has been both meaningful and inspiring. As a speaker at the Cleveland ICAP Conference last year, I had the privilege of sharing clinical insights and connecting with like-minded professionals dedicated to improving outcomes for patients with tethered oral tissues. This experience reinforced my belief in ICAP's vital role in bridging disciplines and advancing global standards of care.

I am driven to be part of ICAP's forward movement—supporting research, education, and advocacy efforts that shape the next generation of clinical practice. I believe my combination of clinical expertise, leadership experience, and passion for collaboration aligns strongly with ICAP's mission, and I would be honoured to contribute to its ongoing success as a member of the Board.
